PROJECTS

Brain Tumor Detection Using Swin Transformer | Python, PyTorch, OpenCV, Matplotlib

- Developed a deep learning-based brain tumor detection system using the Swin Transformer architecture for MRI image classification.
 - Applied image preprocessing techniques including resizing, normalization, and data augmentation to improve dataset quality and model performance.
 - Utilized transfer learning by fine-tuning a pre-trained Swin Transformer model for accurate brain tumor classification.
 - Trained, validated, and evaluated the model using PyTorch, analyzing performance with metrics such as accuracy, precision, recall, and F1-score.
 - Visualized prediction results and model performance using OpenCV and Matplotlib to support analysis and interpretation.
